

Thinking that even large flat panel TVs should be easy to tilt? Then think about this...

Think smooth and effortless tilting.

Only Sanus offers a complete line of flat panel TV wall mounts featuring a patent-pending Virtual Axis™ fingertip tilting system. With Virtual Axis technology, you can tilt even the largest flat panel TV with just the gentle push of your finger. That's because the ingenious engineering behind the Virtual Axis balances the TV's weight on itself, so very little effort is required to tilt it. And each time you tilt it, it'll stay exactly where you put it. That's right. No drooping during your favorite movie. You won't wake up to find your TV staring at the floor. You don't even need to adjust the tension. It's that easy.

Think about the convenience.

Let's say you've got your TV set for perfect viewing from the couch across the room. But, what about Saturday mornings when the kids want to sit on the floor and watch Spongebob™? No problem. With Virtual Axis tilt, you can just walk over and tilt it down. When you want to watch the game or the news, simply tilt it up again. And don't bother getting the toolbox out. Sanus mounts are the only mounts available that can be tilted without using tools or adjusting complicated mechanisms.

Think aesthetically.

The last thing you want is a mount for your sleek new LCD or plasma TV that looks like it belongs out in the garage. Sanus mounts are available in a quality powder-coated silver or black finish to match your TV. And they look good. Period.

Think sturdy and stable.

Sanus mounts are constructed of heavy-gauge steel and extruded aluminum to securely hold flat panel TVs weighing as much as 175 lbs. The fact that you can have real fingertip tilting with a TV that heavy is a testament to the excellence of Virtual Axis engineering.

Think easy installation.

You won't need to hire a handyman because Sanus mounts are also designed for DIY installation. They easily accommodate different wall stud spacing, the TV attachment is all thought out for you and mounting hardware is included. You can think of it as hanging a picture.

Think about getting Virtual Axis tilt.

The Virtual Axis fingertip tilting system is available in five different models as shown above to match whatever flat panel TV suits your fancy – from small 15" up to the giant 60" heavyweights. Of course, they are also great for today's flat panel computer monitors. All five models feature the revolutionary Virtual Axis fingertip tilting system, and one of them (model VM5A) also adds an extension arm for swivel and pan motion.

Think Sanus.

Virtual Axis is just the beginning. Check out www.SANUS.com right now to learn about the hundreds of other mounting and furniture options. Once you've found the perfect model for your needs, use the dealer locator to find one of the thousands of retail locations nationwide that's nearby.

There's also a complete line of extruded aluminum mounts. In all, Sanus has more than a dozen patents and patents pending on a full range of flat panel TV wall mounts.

Virtual Axis system™ provides smooth fingertip tilt motion even when supporting heavy loads

TV stays in position at any angle. And there's nothing to loosen or tighten.

Installation can be completed in a matter of minutes.

Thumb knob allows user to set the desired tilt tension.

Extruded aluminum arm on model VM5A provides rigid motion.
