

Considering a new flat panel TV or computer monitor? Then consider this...

An easy choice.

The Sanus VisionMount line is the easy choice for mounting a flat panel TV or computer monitor.

Easy to mount anywhere.

The VisionMount line is designed to handle any mounting and adjustment need. Choose the specific motion you desire. **TILT** adjusts the viewing angle up and down. **SWIVEL** adjusts the viewing angle from side to side. **PAN** allows the TV to swing from side to side. **EXTEND** allows the TV to be pulled forward or pushed backward. The VisionMount line allows mounting in virtually any application including walls, ceilings, under cabinets or even around corners.

Easy to look at.

Your new flat panel TV will be sleek and modern looking. Make sure your mount is, too. The extruded aluminum construction of Sanus VisionMount products complements the high-tech look and feel of today's flat panels. And the machined aluminum finish looks better than the painted zinc or steel found on most competing products.

Easy to adjust.

The SmoothLock™ pivot mechanism provides effortless viewing angle adjustment.

Simple hand-tightened tension knobs set the desired tension with no tools required. Most competing products require one or more tools every time you want to adjust the tilt or swivel of your TV.

There's even an anti-backdrive mechanism, which means that the

SmoothLock pivot will never loosen. Simply set the desired tension once, and adjust the TV again and again. The tension will remain exactly the same.

The heart of the SmoothLock mechanism is a patent-pending tapered bearing. The nickel-plated bearing provides a stronger, smoother pivot point, which means silky-smooth free-flowing motion even under the full load of a heavy TV.

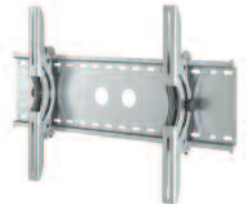

Easy to install.

Sanus VisionMount products are VESA 75/100 compliant. That means they will fit most flat panel TVs available today. And they include all necessary mounting and installation hardware. In most situations, a VisionMount product can be installed in about 15 minutes. It's as simple as screwing it onto the TV, drilling a couple holes in the wall, attaching screws to the wall and hanging the mount. You'll be done in time to catch your favorite show.

Easy to get.

Sanus products can be found at thousands of retail locations nationwide. Please visit www.sanus.com where you'll find a wealth of A/V furnishings. And while you're there, use the dealer locator to find a store near you.

There's even a line of heavy-gauge steel models designed for 32" to 60" flat panel plasma and LCD TVs.

The machined aluminum finish is the perfect match for the sleek, modern look of today's flat panel TVs

Meets VESA standards – easily mounts to most flat panel TVs and computer monitors

Model VM3s is perfect for office environments – easily pushes back out of the way

Model VM2s can be easily configured for mounting under cabinets in kitchen or anywhere

Allen-style bolts are included for applications where permanent positioning is desired
